

PRINTING WITH WHITE

Printed with 4 color on Kraft paper

Printed color elements blend into dark materials.

Printed with 4 color + White on Kraft paper

White lays behind the printed color elements to prevent them from blending into dark materials.

White is the key to color printing that is often overlooked, as it is typically used to allow printed colors (CMYK) to be accurately printed and visualized by the human eye. Capable of printing CMYK+WHITE toner in a single pass, the QL-300 produces extremely durable and highly accurate colors on a wide variety of label substrates, including transparent, colored and metallic.

This new capability makes it possible to easily create impactful product labels that allow your brand to establish a unique and attention-grabbing identity.
