INDIRECT FOOD CONTACT GUIDANCE- AJ-800/1300 PIGMENT INKS

Products Covered:

Printer	INK PNs
AJ-800/ AJ-1300	930.26.0001.00, 930.26.0002.00, 930.26.0003.00, 930.26.0004.00

AJ-800/1300 pigment inks are suitable for use on the exterior of food packaging, where a functional barrier separates the print from the food.

Printed samples produced with these inks were tested by an accredited third party laboratory and found to meet the general safety requirements defined in Article 3 of *Regulation (EC) No 1935/2004* on materials and articles intended to come into contact with food, for the specific application that was tested. The samples were also assessed against migration limits referenced from *Regulation (EU) No 10/2011*, and all the results complied with these limits.

This statement is provided to offer guidance and confidence that the inks, when properly applied, are suitable for indirect food contact applications. It cannot be directly applied to individual packaging designs, as final compliance depends on factors such as substrate type, ink coverage, barrier properties, and the nature of the packaged food.

This statement is provided for guidance purposes only and is not a certification for any specific application.

End users are responsible for performing their own testing and obtaining any required certifications to confirm the compliance of the finished packaging for its specific application.

Note: These inks are not suitable for direct food contact.

Sincerely,
AstroNova Team
